To fix Kingston flash drive, used software HP Drive Key Boot Utility (supports Win XP, Vista, Seven). Kingston does not release software support to fix flash drives. HP Drive Key Boot Utility, is software that is used to fix product HP (Hewlett Packard), but can also be used to fix Kingston flash drive. This type of damage can be repaired with HP Drive Key Boot Utility:

- File system RAW/unknown, used space 0 bytes, free space 0 bytes, flash drives can not be formatted, quick format, and format from Administrative tools (type; damage partition table)

HP Drive Key Boot Utility, can not be used to repair damage

1. Capacity 0 bytes, 48 bytes (type; damaged firmware)
2. Flash drive is write protected (type; damaged firmware)

pdfcrowd.com

3. When inserted, the detected Generic flash drive (type, damaged firmware)

Note
HP Drive Key Boot Utility to repair damage Kingston 2 GB, 4 GB. To capacity 8 GB, 16 GB, 32 GB etc, HP Drive Key Boot Utility, can be used, but capacity of flash drives will be changed to 2 GB. To restore normal capacity flash drives, there are some things to do.

To avoid mistakes in the repair flash drive, you should do the Analysis of Damage a Flash Drive

Note
Flash drives have two main parts ROM (Read Only Memory) and RAM (Random Access Memory).
ROM = partition table
RAM = firmware
HP Drive Key Boot Utility, function to repair damage ROM/partition table. To damage RAM/firmware, HP Drive Key Boot can not be used.

5. After process is complete, unplug flash drive from the computer.
6. Connect flash drive with a computer, then quick format flash drives.
7. Restore all data into flash drive. Finish.

How to restore capacity Kingston flash drives

(for Kingston capacity 8 GB, 16 GB, 32 GB, etc)

This solution I write from experience when fix Kingston 32 GB.
After using HP Drive Key Boot is completed, capacity of flash drives changed to 2 GB. To restore the original capacities, which is do is

unknown, used/free space = 0 bytes, can not formatted.
Solution;
One cause damage to the pen drive is a cracked tin/lead solder. All you have tc
drive. Use the solder, then heat the connectors of each component (heat the tir
workpieces). Do this work carefully.

I hope this solution can help.

Hi, I have a big problem. I found your very useful blog. :)

My Verbatim 16Gb Tuff n Tiny drive now is detected as just a USB DISK 30X U:
the process of detection, somehow, I saw Kingston and managed to trace goo
a Kingston flash memory indeed. Is there any way or hope of recovering data fr
the firmware is corrupted. Any cure for this? Thanks in advance!

1. Download and install EASEUS Data Recovery
http://www.mediafire.com/?bi9a...
2. Insert flash drive
3. Open EASEUS Data Recovery software (don't update)
4. Select, Complete Recovery - select Drive - Next - wait until finish.
5. Saved all data, and save to hard drive.

Hi Ishadi, Thanks. I ran Easeus but it cannot seem to find anythi
something in a Hex editor and yet it cannot find anything during t
very sure the data is still there. I think the firmware is really scre
we can recover the data. *sigh* Hope there is still hope.

Sunny Westmere ↪ ishadi aplus • a year ago

Any idea, friend? I think we need to recover firmware first before
data. How to do that? Anything I could use? I am just worried res
destroy the data. If not, that would be good.
